

Lists all known bugs in your code. If you list the bugs here, you won't lose points for those.

1. No Sign Out Button. Even if sign in, there are still sign in buttons.
2. If no accounts in signed in, the page will show weird data and format looks weird.
3. When updating personal info, you need to fill out all fields regardless if filled out previously.
4. If user BMI and Personal info is not filled out, profile will display null for Age, Gender, Height and Weight.
5. The format of the app looks bad when the window width is small
6. Some styling link appears in front of many pages; if we put those in the headers, the styles does not show up, so we have to repeat these links in different files
7. For a new account, profile image may not show up if the user does not submit all information in this app.
8. No auto scroll in chat
9. Fitness data chart auto-displays first option when no other exercise is chosen.
10. currently, if users do not fill in all inputs in a form, any previous information will be overwritten with blanks
11. some icons are not transparent background.
