

# Style Code Guide

## Javascript

- 2 spaces for indentation
- Single quotes for strings
- Semicolons

## CSS

- Most ejs files share one css file to avoid repetition
- Code styling a larger section of a page should go first
  - E.g. Style for a page should be written before style for a table
- Prioritize class over id.

## HTML

- CSS imports on top
- Javascript imports on the bottom
- Each html page has a head which includes title
- Ideally each page should import an header and footer, unless it conflicts with other CSS and JS files imports
- Standard waterfall tags
- No CSS in HTML use an css file

## Project Structure

```
--docs
--node_modules
--private
--public
    --css
    --fonts
    --images
    --js
--views
    --partials
Server.js
Package.json
Reademe.md
.gitignore
```
